

Case Study:

Aza Fashion

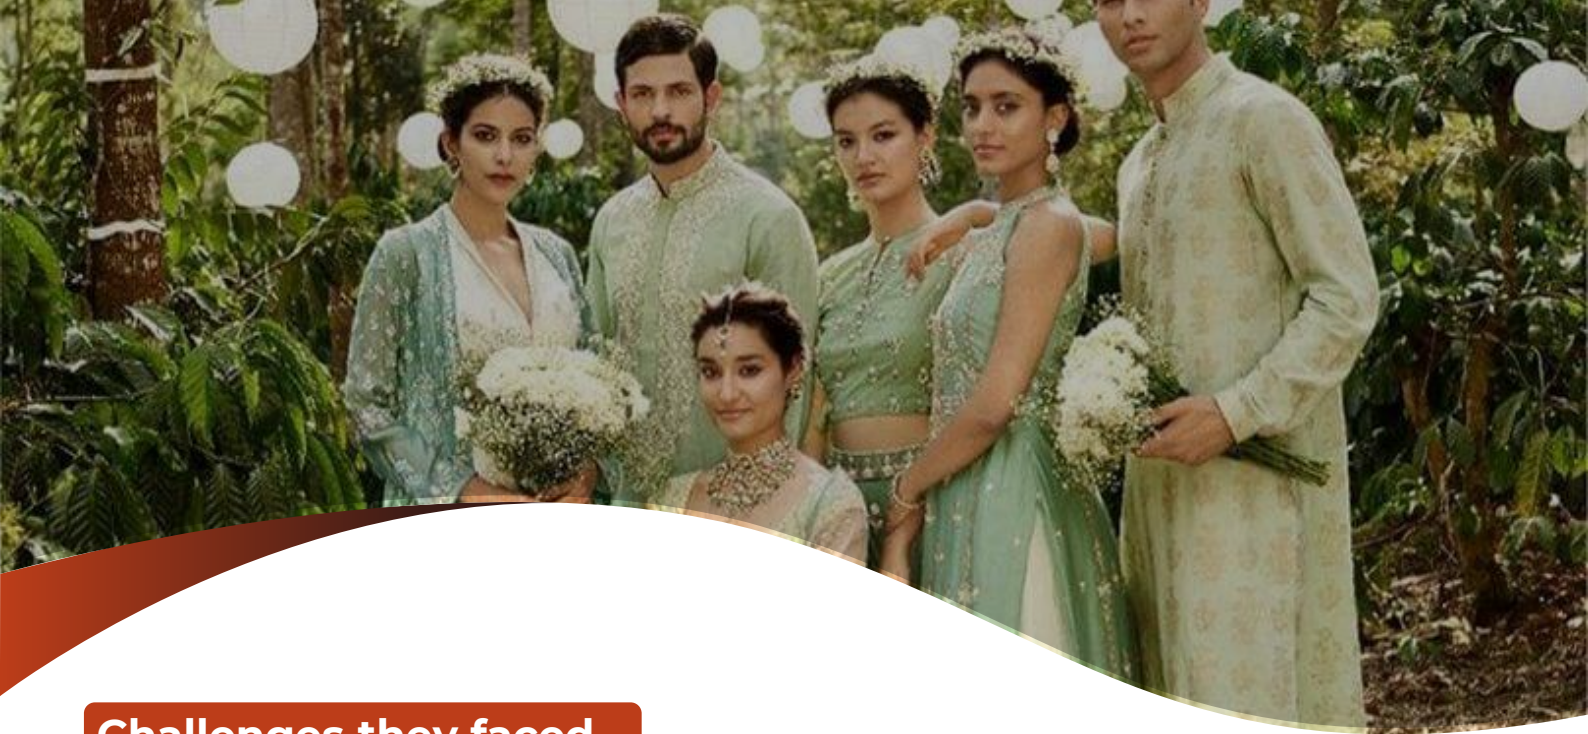

Manufacturing Workflow Simplified - Through CREST ERP Manufacturing Suite

About Client

Aza Fashion is a custom-designed fashion industry. They showcase sample-designed dresses on their online platform and in offline stores. Customers can place sales orders, and Aza Fashion then raises a purchase order to the production unit. The production unit manufactures the products and sends them to the warehouse or stores for distribution.

Industry:	Manufacturing
Number of Entities:	1
No. of their Customers:	10 (own Stores)
Market they serve (Geo):	Domestic and Export
Invoice generated/Month:	30
Number of Users:	10
Financial Transactions/Month (from all modules):	200

Challenges they faced

They did not use any ERP system earlier, relying on Excel sheets to maintain inventory details, costing sheets, and production orders.

No audit log to track changes in the Excel records.

Finance entries were only posted in Tally.

Lack of proper tracking for stock issued to the job worker for embroidery and die fabric.

They faced challenges in production tracking, managing inventory levels, and estimating supplier delivery times.

Inadequate tracking for stock received and job work charges.

There were issues with actual and estimated costings, and there was

Solution we provided

To address the challenges, CREST ERP modules were implemented with the following solutions:

CREST replaced manual Excel tracking by centralizing inventory, costing sheets, and production orders in one platform.

CREST maintains an audit log to track all record changes, ensuring accountability and transparency.

Finance entries were integrated into CREST, eliminating the need for Tally and improving financial tracking.

Sales orders, delivery estimates, and production schedules are managed end-to-end, linking sales to production.

CREST provides real-time production tracking, enhancing visibility into order status and timelines.

Subcontract module was implemented to manage subcontract orders, including stock issuance and stock receipt against the orders.

Inventory levels and supplier delivery estimates are managed accurately in CREST, improving supply chain efficiency.

Finance module was also integrated with the Subcontract module to facilitate service invoice creation.

Post Solution Benefits they got:

Faster and easier processes with all data in one place.

Better control over finances with everything in one system.

Clear visibility of production status and timelines.

Improved inventory control and better supply chain management.

Smooth connection between sales orders, production, and dispatch.

Better tracking of changes with a log for accountability.

Modules Implemented:

Inventory Management

Sales

Finance

Facility

Accounts Payables

Manufacturing

Procurement

Accounts Receivables

Subcontract
